Overview

Hewlett Packard's MSA P2000 Family of storage arrays features P2000 G3 arrays with the latest 8 Gb Fibre Channel, 6 Gb SAS, 10GbE iSCSI connected models, and an iSCSI model with four 1 Gb iSCSI ports per controller. The arrays are designed for entry-level customers and feature the latest in functionality and host-connect technology while offering excellent price/performance. They are ideal for companies with small budgets or limited IT expertise, and also larger companies with departmental or remote requirements. Each solution is designed to be easy to deploy, to be secure, along with low management costs, while driving rapid return on investment through efficient storage consolidation.

The MSA P2000 G3 arrays are 2U storage area network (SAN) or direct connect solutions (OS and protocol dependent) offering a choice of five controllers - two FC, one SAS, one 10GbE iSCSI and the newest model features a four port 1 Gb iSCSI. The first Fibre Channel controller is a high-performance, 8 Gb dual port model. The second offering is a unique dual-purpose Combo controller with two 8 Gb Fibre Channel ports with the addition of two 1GbE iSCSI ports. The third controller choice is 6Gb SAS with four ports per controller. There is also the addition of a two port 10 Gb iSCSI, while the latest controller introduction features four 1 Gb iSCSI ports per controller. Whatever the situation calls for, the P2000 G3 line-up has the right solution.

The dual-protocol MSA P2000 G3 MSA FC/iSCSI Combo Controller gives exceptional flexibility. The 8 Gb FC ports support a full FC SAN while the two 1GbE iSCSI ports can serve two purposes. With this combination you can economically share the array storage resource with a smaller department accessing it over iSCSI or enable the new optional Remote Snap functionality over iSCSI protocol (also available over FC).

The MSA P2000 G3 SAS is the follow-on product to the MSA2000sa G2, adding the latest 6 Gb SAS technology to the four host ports per controller. The P2000 G3 SAS array is designed for directly attaching up to four dual-path or eight single path rack servers. SAS array support for BladeSystems utilizes the HP 6 Gb SAS BL Switch.

The MSA P2000 G3 10GbE iSCSI brings the very latest in high-performance host connection with technology generally found only in higher priced arrays. The bandwidth it provides in conjunction with server consolidation is highly advantageous in shared storage configurations. Array connection to 10GbE switches that are in turn connected to 1GbE NICs is commonplace. Directly attached server support requires the server units to have 10GbE NICs.

Rounding out the controller choices is the MSA P2000 G3 iSCSI controller featuring four 1Gb iSCSI Ethernet ports, double the number of the G2 model. This allows an array that keeps the price of the components, particularly the interconnects, low while markedly increasing the performance capabilities.

All MSA P2000 G3 models can be equipped with single or dual controllers, feature the same scalability, and offer 6 Gb SAS back-end transmission speed to drives and JBODs. Significant data protection advances are delivered by the all P2000 G3 arrays. All G3 units come STANDARD with sixty-four snapshot capability at no extra cost and there is an option for the G3 series of five hundred and twelve snapshots. Volume Copy (clone) also comes standard. In a further move to protect the user's data, optional Remote Snap (replication) capability is offered on the FC, FC/iSCSI, and both iSCSI versions.

All MSA P2000 G3 models support hot plug replacement of redundant controllers, fans, power supplies, and I/O modules. Hot add of expansion enclosures is also supported.

The controller-less MSA P2000 chassis is offered in two models - one comes standard with twelve Large Form Factor (LFF) 3.5-inch drive bays, the other can accommodate twenty-four Small Form Factor (SFF) 2.5-inch drives. Both are able to simultaneously support enterprise-class SAS drives, SAS Midline, and archival-class SATA Midline drives. Either chassis can have one or two matching P2000 G3 controllers (same protocol) and are available with AC or DC power Supplies.

The HP modular approach to entry level SAN solutions enables incremental customer purchases, allowing the array to grow as needs grow, thus allowing a maximum return on investment. Choose a single controller unit for low initial cost with the ability to upgrade later; or decide on a model with dual controllers for the most demanding entry-level situations. There are no unexpected additional charges, licenses or fees as you add enclosures or hosts and users.

Capacity can easily be added as the need develops by attaching additional drive enclosures. Maximum capacity ranges with LFF drives up to 57.6 TB SAS, 288 TB SAS Midline or 192 TB SATA Midline with the addition of the

Overview

maximum number of drive enclosures. Configurations utilizing the SFF drive chassis and the maximum number of drive enclosures can grow to 134 TB of SAS, 149 TB of SAS Midline or 74.5 TB SATA Midline with a total of 96 LFF or 149 SFF drives. The P2000 G3 Arrays do not support SSDs.

What's New in the P2000 G3 array family

- Compliance to 2013 ROHS requirements
  - Part numbers listed as changing below are functionally identical. The change from an "A" version to a "B" version was implemented to make an obvious distinction between newer parts that were produced in full compliance with European Union RoHS 2.04 requirements and older non-compliant parts that may still be in HP's spare parts inventory. This change ensures without question products shipped worldwide after January 1, 2013 are in compliance with the RoHS 2.04 requirements.

Key Features

The HP P2000 G3 Modular Smart Array family encompasses five controllers, each featuring different protocols or combination of protocols to match the exact needs of the user.

- P2000 G3 FC/iSCSI Combo MSA controller: this unique controller offers both 8 Gb Fibre Channel and 1 GbE iSCSI functionalities built into a single array controller. This allows customers to enable storage needing high performance thru the FC ports while leveraging their SAN investment by sharing the array resources with smaller departments through low-cost iSCSI. It also enables optional Remote Snap (replication) for data protection.
- P2000 G3 FC MSA controller: Dual 8 Gb Fibre Channel host ports per controller give high performance with a mature topology and is compatible with the largest installed base of SAN users.
- P2000 G3 10GbE iSCSI MSA controller: HP was the first of the major modular array manufacturers that brought a high performance dual-ported 10GbE iSCSI solution to the entry level segment. Ideal for those who want to utilize cost-effective Ethernet as their infrastructure without sacrificing access time to their data. Now supports Remote Sna (replication).
- P2000 G3 SAS MSA controller: the P2000 G3 SAS model gives fast 6 Gb transmission rates with low cost SAS connections. Four host ports per controller support a highly efficient direct connect configuration.
- P2000 G3 iSCSI MSA controller offers four 1 Gb iSCSI ports utilizes the popular Ethernet infrastructure with its low cost and ease of management, while the additional ports assure increased performance over the previous generation Now supports Remote Snap (replication).

All P2000 G3 models offer a common set of valuable features:

- Ease of management featuring browser-based out-of-band access. This allows a department or small company to effectively handle growing storage requirements, with the aid of an intuitive GUI to administer the unit with a minimum of complexity. Ideal for local or remote installations.
- All G3 models come standard with 64 controller-based snapshots and clone capability. The G3 arrays also support a optional 512 snaps.
- Choose either a low-cost single controller array or start with a configured dual controller array model to fit the budget high availability, and performance needs.
- All models feature a wide variety of drives: enterprise-class SAS, SAS Midline, and archival-class SATA Midline in either P2000 LFF 3.5-inch or HP ProLiant SFF 2.5-inch drives.
- P2000 G3 models can have a maximum number of P2000 LFF drive enclosures (7), a maximum number of D2700 SFF enclosures (5), or mix both sizes. The array can grow incrementally from a few drives to 134 TB SAS, 288 TB o SAS MDL or 192 TB SATA MDL.
- 2 GB transportable read/write cache per controller. Battery-free cache backup with super capacitors and compact flash
- Vdisks can be spanned across multiple enclosures
  RAID levels 0, 1, 3, 5, 6, 10, 50
- Maximums vary by RAID levels: 2 drive max for RAID level 1; max of 16 drives for RAID levels 0, 3, 5, 6, and 10; max of 32 drives for RAID level 50
- 512 LUNs with LUN sizes greater than 40TB depending on the RAID configuration chosen. The maximum LUN size i 64TB
- Non-disruptive on-line controller code upgrade (requires dual controllers w/ multi-pathing software)
- Upgradable by design. Owners of an original MSA2000 G1 or G2 array are able to do data-in-place controller upgrades to the P2000 G3 FC, Combo FC/iSCSI, 1 Gb or 10GbE iSCSI, or P2000 G3 SAS. Cross protocol upgrades are also supported between the protocols. This unique ability protects the earlier investments in chassis, drives, and JBODs

HP P2000 G3 FC MSA SAN Starter Kits

The new P2000 G3 FC MSA SAN Starter kits are offered to simplify ordering and implementation of your SAN. HP include all the necessary hardware components to build your own SAN solution in one package, just add the drives of your choice These kits are offered at very affordable prices which reflects a savings over purchasing each SAN component separately.

Features

		Retiring SKU RoHS Compliant SKU	RoHS Compliant SKU
Virtualization SAN Starter Kit	HP P2000 G3 FC MSA Dual Controller Virtualization SAN Starter KitThe HP P2000 G3 FC MSA Dual Controller Virtualization SAN Starter Kit addresses the growing need for server and storage administrators to deliver end-to-end storage, virtualization, and management capabilities across their network infrastructure. The hardware bundle consists of six Host Bus Adapters (HBAs), two FC switches, a P2000 G3 FC MSA Dual Controller Array (SFF Chassis) as well as two licenses per switch enabling Server Application Optimization (SAO) and Adaptive Networking (AN). SAO is an adapter technology that offers Quality of Service (QoS) capabilities that can be used in conjunction with fabric wide QoS and AN to enable a high performing, virtualized infrastructure. With SAO deployed, administrators can protect a VM and its application by assigning its IO flow to a specific priority level. The QoS priorities are enforced at the hardware level, thereby providing adequate bandwidth during periods of high congestion. Applications such as email and databases achieve better performance when deployed in specific SAO and MSA configurations.	AP848A	AP848B
Small Business SAN Starter Kit	HP P2000 G3 FC MSA Dual Controller Small Business SAN Starter Kit The HP P2000 G3 FC MSA Dual Controller Small Business SAN Starter Kit is a unique end-to-end 8 Gbps SAN Solution, just add disks and power. This kit includes one 8 Gbps P2000 G3 FC MSA Dual Controller Array (LFF Chassis), four 8 Gbps FC HBAs, two HP SN6000 Stackable 8 Gbps 8-port FC switches and HP unique Simple SAN Connection Manager (SSCM) SAN management software, cables, rails and optics. SSCM is the only SAN management software that can manage the FC switch, HBA and provision HP storage from a single pane of glass.	AP847A	AP847B

Application Solutions

The HP P2000 SAN is the ideal solution for customers running Oracle, Microsoft, SAP environments and those customers who are deploying virtual server technologies like VMware, Hyper-V, and Orac Virtual Machine. The HP P2000 SAN delivers enterprise functionality that enhances virtual environments, simplifies management, and reduces costs. Easy to deploy, scale and maintain, HP P2000 SANs ensure that crucial business data remains available.
HP has developed best-in-class expertise in Oracle, Microsoft, SAP, and Virtualization Hypervisor technology through extensive testing with the HP P2000 SAN, HP servers, and management software; high availability and disaster recovery solutions; and backup and recovery on the Oracle, Microsoft, and SAP application platforms. As a result, our customers can expect a wide range of operational and business benefits where they can:

- Deploy IT assets across multiple locations.
- Incrementally grow storage without interruption.
- Enable high availability and disaster recovery capabilities for critical applications.
- Deploy a remote disaster recovery site.

Product Technology

8Gb Fibre Channel controller Two host ports per FC controller shipped with SFPs. The P2000 G3 FC controller can run in either point-to-point or FCAL (loop). The default is FCAL which is used in Direct Connect, particularly with tw controllers. The PtP (fabric) mode is used with almost all switches.

Family Information

Combo controller with FC and iSCSI ports

This ingenious dual-protocol "combo" controller supports a full FC SAN through the 8Gb FC ports, whi designating the two 1 GbE iSCSI ports to enable remote replication over iSCSI protocol and perform a an iSCSI target. This allows economical sharing of the storage resource (the P2000 G3 array) with one department needing the performance afforded by the 8 Gb FC ports while simultaneously supporting another department with lesser performance needs and a budget only allowing a 1GbE iSCSI network.

6Gb SAS controller

Four 4x host ports per 6Gb SAS controller.

10GbE iSCSI controller

Two 10GbE ports per G3 10GbE iSCSI controller. Ports are ready for the choice of SFP (none include Supports the ProCurve and ISS versions of the following 10GbE parts for use in the controllers:

HP 10Gb Cables

- HP SFP+ 10GbE Copper Cable
- HP ProCurve 10-GbE SFP+-SFP+ Direct Attach Cable

HP SFP+ Transceivers

- HP BladeSystem 10Gb SR SFP+ and HP BladeSystem 10Gb LRM SFP+
- HP ProCurve 10-GbE SFP+ SR Transceiver and HP ProCurve 10-GbE SFP+ LRM Transceiver
- No SFP+ LR Transceiver support

1 Gb iSCSI controller

Four 1 Gb Ethernet iSCSI ports per G3 iSCSI controller

Modular Chassis

2U rack height. 12 Large Form Factor or 24 Small Form Factor drive bays, accommodating SAS and SATA. Comes with space for one or two controllers, or P2000 3.5-inch disk Enclosure I/O modules (LI chassis only)

Drives available

The P2000 G3 controllers support both the P2000 3.5-inch Large Form Factor (LFF) drives, and the HI ProLiant 2.5-inch Small Form Factor (SFF) drives.

- Serial Attached SCSI (SAS) enterprise-class drives are designed for high demand, 24x7 usage.
- SAS Midline and SATA Midline are usually reserved for archival of data as they are both relativel inexpensive and are available in very large capacities.

The HP entry-level family of arrays can accommodate both SAS and SATA drives within the same enclosure making it ideal to have both business-critical, high activity files on SAS drives while using Snapshot, clone, or Remote Snap capability to keep back-up or archival data on the less expensive drives.

For investment protection, the controllers will support single and dual port SAS & SATA drives in a legacy single - or dual - domain MSA70. This support allows current owners of MSA70s to migrate the single port drives (in their MSA70 only, not into the array head) to be attached to a P2000 G3 FC or SAS. They can only cascade to another single I/O MSA70. This is not a data-in-place transition, and overall performance could be impacted.

SAS drive performance can be approximately 30% greater than SATA performance on sequential host I/O. SAS performance excels in sequential lower latency response time and random I/O per second transaction performance due to higher rpm disk speeds yielding lower seek times. SAS drive random performance is generally twice that of SATA drives.

NOTE: P2000 and MSA2 3.5-inch Large Form Factor (LFF) drives are for use only in the P2000 G3 or MSA2000 models. The 2.5-inch Small Form Factor (SFF) drives are supported only with the P2000 G3 or the MSA2300 G2 controllers and are common with and are the same part numbers as the ProLiant hot-plug 2.5-inch drives.

Optional Disk enclosures

Just as the user has a choice of chassis for the array head (LFF and SFF drive bays, AC or DC powered), so also do they have a choice of expansion disk enclosures accommodating either drive siz Both the P2000 and the D2700 disk enclosures can be hot-added to an operating array.
(**NOTE:** these are not supported as part of a NEBS-certified configuration with the MSA Carrier Grade Chassis. There is a certified JBOD listed in the Carrier-grade section)

P2000 3.5-inch drive enclosure. This 2U unit has twelve LFF (3.5-inch) drive bays and accepts for P2000 dual-ported SAS and SATA drives. The pre-configured HP P2000 Dual I/O LFF Drive Enclosure (AP843B) has two I/O modules and supports both single and dual controller arrays. If a single I/O disk enclosure model is desired, the appropriate chassis should be purchased along with a single I/O module (AP844B).

- This 3.5-inch drive enclosure can be attached to either the P2000 G3 FC or SAS LFF or SFF array head.
- Each configured model ships standard with two .5m mini-SAS to mini-SAS cables for cascading to other P2000 drive enclosures
- Up to seven P2000 3.5-inch enclosures can be attached to a P2000 G3 FC, FC/iSCSI Combo, c SAS controller in the array head.

D2700 2.5-inch drive enclosure. This 2U storage enclosure (AJ941A) is designed to support twenty five ProLiant 2.5-inch Universal form factor (SFF) 6Gb SAS or SATA hard drives. It ships standard with dual I/O modules installed.

- This 2.5-inch drive enclosure can be attached to a P2000 G3 controller (SFF or LFF) array head
- The D2700 enclosure ships with a two .5m miniSAS to miniSAS cable.
- Up to five D2700 may be attached to the P2000 G3 array head, given total support for 149 SFF drives.

Scalability

The P2000 G3 FC, Combo FC/iSCSI, SAS, 1 Gb or 10GbE iSCSI controllers are designed to allow an installation to begin with smaller capacity and be able to grow gradually as needed. The flexibility of SAS or SATA drive technology, form factors, sizes, speeds, and costs per GB allows a system to eas fit in almost any budget.

- Large Form Factor configurations can scale up to 7.2 TB SAS, 36TB SAS MDL or 24 TB SATA, expandable to 57.6 TB SAS, 288TB SAS MDL or 192 TB SATA with the addition of a maximum seven P2000 3.5-inch Drive Enclosures.
- Small Form Factor configurations can scale from 21.6 TB SAS, 24 TB SAS MDL or 12 TB SATA MDL. With the addition of five D2700 JBODs, the P2000 G3 can support 134 TB SAS, 149 TB SAS MDL or 74.5 TB SATA MDL.
- Users may configure a 24-drive P2000 G3 SFF array head with 12-drive LFF P2000 3.5-inch disk enclosures. This is an excellent method for a configuration that supports fast SFF enterprise-class SAS drives in the array head, combined with economical LFF drives staged for archival purposes, all in the same array.
- Qualification of larger capacity drives is ongoing.

Vdisks

Vdisks can span across multiple enclosures, where drives used in the Vdisk can be contained in different enclosures. The maximum number of drives that can be used in RAID 1 Vdisk is 2; RAID 0, 3 5, 6, and 10 is 16; and for RAID 50 Vdisk is 32.

LUNs

The HP 2000 family of arrays supports 512 LUNs (total volumes in a dual controller system) and LUN sizes up to 64 TB depending on the RAID configuration chosen. The array supports expansion and deletion of any LUN.

RAID 0, 1, 3, 5, 6, 10, 50

In addition to the usual RAID levels, the P2000 G3 features several important additional levels. RAID 6 is the highest level of RAID protection. It allocates two sets of parity data across drives and allows simultaneous write operations. It can withstand two simultaneous drive failures without downtime or data loss. RAID 10 is mirroring and striping without parity. It is the most popular of the multiple RAID levels, allowing large arrays with high performance in most cases and superior fault tolerance. RAID 50 combines the block striping and parity of RAID 5 with the straight block striping of RAID 0, yielding higher performance than RAID 5 through the addition of RAID 0, particularly during writes.

Performance

Performance numbers are a guideline as established by tests using RAW I/O in an Operating System Agnostic test lab environment. 144 GB 15K SAS drives were used in a dual controller configuration of 12 vdisks consisting of twelve disks per vdisk, 1.6 TB volumes, and 3 volumes per host. 4 hosts direct attached to the P2000 G3 array were used in this test configuration (results cannot be expected with a single host). Results were achieved in Sequential Writes with 256K blocks; all random tests were bas on 8K block sizes.

NOTE: Number and type of applications, drive type and number of drives, operating system used, and the number of hosts will affect overall performance. This table is provided strictly as a test-lab

comparison. Note: These numbers reflect a full array configuration with the maximum number of front-end ports, disks, and controllers. The test results shown for the P2000 G3 are designed to give a conservative reference point for comparisons.

2000 Array Performance	P2000 G3 FC	P2000 G3 SAS	P2000 G3 10GbE iSCSI	P2000 G3 1GbE iSCSI
Protocol (host connect)	8 Gb Fibre Channel	6 Gb SAS	10Gb Ethernet	1 Gb Ethernet
2000 RAID 10 Performance Results				
Sequential Reads MB/s	1,650	1,650	1,600	550
Sequential Writes MB/s	850	850	800	525
Random Mix IOPs 60/40 read/write	20,500	23,500	18,500	17,200
2000 RAID 5 Performance Results				
Sequential Reads MB/s	1,650	1,650	1,600	550
Sequential Writes MB/s	1,300	1,350	1,000	525
Random Mix IOPs 60/40 read/write	14,000	16,000	12,500	9,400
2000 RAID 6 Performance Results				
Sequential Reads MB/s	1,650	1,650	1,600	550
Sequential Writes MB/s	1,300	1,100	1,000	525
Random Mix IOPs 60/40 read/write	8,300	9,800	7,500	5,600
Refer to the paper titled "Upgrading the HP MSA2000 (G1 or G2) to the P2000 G3 MSA ", available in the Resource Library at: www.hp.com/go/p2000.				

DC-power chassis

HP is making the two models of controller-less chassis available with direct current (DC) power supplies. They each have the two empty bays where users can insert one or two P2000 G3 controller(s). In addition, the P2000 chassis with LFF drive bay can have P2000 3.5-inch I/O modules inserted to create a LFF DC-power JBOD.

The 500 watt power supply is designed to operate over the input range of -40VDC to -75VDC.

	Retiring SKU	RoHS Compliant SKU
HP P2000 DC-power LFF twelve 3.5-in Drive Bays (supports up to 2 controllers or I/O modules)	AP840A	AP840B
HP P2000 DC-power SFF twenty-four 2.5-in Drive Bays (supports up to 2 controllers, not I/O modules)	AP841A	AP841B

Configuration and Management Tools

HP Storage Management Utility (SMU). Management access, out-of-band: WEB GUI, CLI. Interface Types: USB, 10/100 Ethernet. Protocols Supported SNMP, SMI-S, SSL, SSH, SMTP, FTP, HTTP, Telnet

P2000 Software and Documents Support CD

- All product documentation (CD can be used on ALL supported server Operating Systems.)
- MSA Device Discovery Tool (Win and Linux) - reports P2000/MSA HW devices, and supported storage software
- Host Software Bundles (Win and Linux for both ProLiant x86, ProLiant x64 and Integrity IA64servers)
- CD updated quarterly on HP.com with sustaining firmware updates

Family Information

Hot Plug Expansion and Replacement Support	All P2000 G3 models support hot plug expansion and replacement of redundant controllers, enclosure fans, power supplies, and I/O modules for simple, fast installation and maintenance. Hot add expansic of disk enclosures is also supported.
Snapshot and Clone	All G3 arrays come standard with 64 snaps, 512 snaps available. Controller based functionality. Offers higher levels of data protection, enabling an almost instant recovery from data failure or corruption. Offers alternative development testing of 'offline' production data and the ability to backup snapped/cloned data.

Overview	The P2000 G3 arrays come integrated with web browser and CLI based software for storage and RAID management, setup, configuration, and troubleshooting. This reduces the cost of ownership by reducing the training and technical expertise necessary to install and maintain your HP storage solution. The SPOCK database provides interoperability information for thousands of components and millions of component combinations. It is available to all users at http://www.hp.com/storage/spock.
Server Compatibility **NOTE:** depends on protocol	Supports most HP ProLiant, BladeSystems and Integrity servers including • HP ProLiant DL, ML • HP c-Class Blade Servers • Integrity servers, IA64 (FC and FC/iSCSI support only) • Compatibility must be confirmed at: http://www.hp.com/storage/spock
Industry Standard servers support	• Supports most multi-vendor industry standard 32-bit Intel and AMD based (x86) servers. HP requires the Third-Party Server to be logo'd and listed on the Microsoft Windows Server Catalog. • Refer to the Microsoft website: http://www.microsoft.com/windows/catalog/server/ • HP Division recommends that the Third-Party Server Vendor is an active member of TSANet. Refer to the TSANet website for details: www.tsanet.com • Non-HP servers will generally be supported if the HP storage stack is used. This includes supported HP branded HBAs and drivers, and supported FC switches.
OS Support Fibre Channel ports	Refer to the HP support statements for complete current OS version support: http://www.hp.com/storage/spock • Microsoft Windows Server 2008 IA32, x64, IA64 (Standard, Enterprise, Datacenter) • Microsoft Windows Server 2008 R2 x64 • Microsoft Windows 2003 SP1, SP2, and R2 and 2003 R2 IA32, x64 • HP-UX • Red Hat Linux (32/64) • SuSE SLES (32/64) • Microsoft Windows Server 2008 x64 Hyper-V • VMware • OpenVMS • Apple Mac OS X (requires ATTO Celerity 8Gb FC HBA) • Solaris 10 (x86)
OS Support Fibre Channel Ports (Integrity)	• HP-UX • Windows • OpenVMS • Linux
OS Support 1GbE iSCSI ports on the G3 Combo FC/iSCSI Controller	• Microsoft Windows Server 2008 and 2008 R2 (x64, IA64) • Microsoft Windows Server 2008 x64 Hyper-V • Microsoft Windows 2003 (SP1, SP2, and R2) and 2003 R2 (IA32, x64) • Red Hat Enterprise Linux (32/64) • SuSE Linux IA32, x64 • VMware ESX
OS Support G3 SAS Controller	Refer to the HP support statements for complete current OS version support: http://www.hp.com/storage/spock •

	• Microsoft Windows Server 2008 IA32, x64 • Microsoft Windows Server 2008 R2 • Microsoft Windows 2003 and 2003 R2 IA32, x64 • Red Hat Linux (32/64) • SuSE SLES (32/64) • Microsoft Windows Server 2008 x64 Hyper-V • VMware • Solaris 10 (x86)
OS Support G3 1Gb iSCSI Controller	• Microsoft Windows Server 2008 SP1, SP2, R2 • Microsoft Hyper-V (x64 only) • Microsoft Windows Server 2003 and 2003 R2, SP2 • VMware • Red Hat Linux (32/64) • SuSE SLES (32/64)
OS Support G3 10GbE iSCSI Controller	• Microsoft Windows Server 2008 SP1, SP2, R2 • Microsoft Hyper-V (x64 only) • Microsoft Windows Server 2003 and 2003 R2, SP2 • Red Hat Linux (32/64) • SuSE SLES (32/64) • VMware **NOTE:** the G3 10GbE array must connect to a 10GbE switch; direct connect to the G3 10GbE array must be to a 10GbE NIC and supported by the OS.
Web Browser support	• The P2000 G3 and the older MSA2000 support target based management, and include a Web interface and a telnet interface, and require a web browser for management. • The P2000 G3 FC requires Microsoft Internet Explorer V7.x or V8.x • The original MSA2000 and the MSA2000 G2 arrays require Microsoft Internet Explorer V6.X and V7.X (strongly encouraged) • Mozilla Firefox 1.0.7 or later is supported

VMware Site Recovery Manager (SRM)

VMware Site Recovery Manager (SRM)

VMware vCenter Site Recovery Manager (SRM) is an extension to VMware vCenter that delivers business-continuity and disaster-recovery solution that helps you plan, test, and execute the recovery of vCenter virtual machines. SRM can discover and manage replicated datastores, and automate migration of inventory from one vCenter to another. Site Recovery Manager integrates with the underlying replication product through a Storage Replication Adapter (SRA).

HP P2000 Site Recovery Adapter (SRA)

The HP P2000 SRA, a free-to-use plugin, is the program that integrates the VMware cCenter SRM with HP P2000 G3 arrays. It enables full-featured use of the VMware SRM. It is a host-software component installed on a Microsoft Windows Server that enables disaster recovery management (DRM) software on the host to communicate and control certain aspects of the replication feature in storage systems connected to the server. It allows the VMware SRM software to automatically coordinate virtual machine failover and failback between a protected data center and a disaster recovery site by employing a disaster recovery solution called Remote Snap. A perfect combinatio of the Remote Snap replication and VMware SRM provides an unfailing automated solution for implementing and testing the disaster recovery between sites located across geographies. It enables communication between the HP P2000 Remote Snap replication functionality that is embedded in HP P2000 Fibre Channel, iSCSI, and Combo Fibre Channel systems. Users are required to acquire Remote Snap license for their local and remote HP P2000 G3 arrays to use th HP P2000 SRA.

Site Recovery Manager Requirements/Dependencies:

- Requires vSphere 5.0/SRM 5.0
  - Not compatible with SRM 4.x
- Requires HP's P2000 SRA 2.0 Plug-in (downloadable from Hp.com)
- SRM works with Remote Snap functionality
  - Requires purchase of P2000 G3 Remote Snap licenses (one for each site)
- Customers must upgrade to T240 or the latest firmware
- SRM works with FC, iSCSI or Combo controllers only

HP Insight Control Storage Module for vCenter

HP Insight Control Storage Module for vCenter

HP Insight Control Storage Module for vCenter is a component within the HP Insight Control plug-in for vCenter. It provides VMware administrators that are using VMware's vSphere management console (vCenter) with the ability to see how virtual machines are mapped to datastores and individual P2000 volumes. By providing these clear relationships between VM's, datastores and storage, the VMware administrator's productivity increases, as does the ability to ensure quality o service. Roles for administrators can be defined on an individual basis, providing the ability to app specific permissions for both view and control functions.

The HP Insight Control Storage Module for vCenter supports mixed array environments including EVA, P4000, P2000 (MSA), and the XP array series including the P9500.

When deployed with the P2000 array, provides the following:

- Active Management functionality for the P2000 array:
  - Create/Expand/Delete a Datastore
  - Create a Virtual Machine from a template
- Monitors the health and status of the P2000
- Displays LUN / volume connections from VMs and ESX servers to the arrays and provides the location and attributes of the P2000 within the SAN
- Identifies what storage features are available to allow administrators to match the features available on the P2000 to their requirements
- Provide a cluster-level view of the storage

HP Insight Control Storage Module for vCenter is downloadable from Software Depot:
https://h20392.www2.hp.com/portal/swdepot/displayProductInfo.do?productNumber=HPVPR

For more information on HP Insight Control Storage Module for vCenter visit:
www.hp.com/go/vmware

vStorage API for Array Integration (VAAI)

The vStorage API for Array Integration (VAAI) is one of the storage application programming interface (API) sets in vSphere 4.1. VAAI is an API storage partners can leverage to enhance performance of virtual machine (VM) management operations by delegating these operations to th storage array. With hardware offload, ESX/ESXi hosts perform certain operations faster and consume less server CPU and memory resources, and also storage port and storage fabric bandwidth. VAAI includes high performance and scalable VM data path primitives. HP introduced VAAI support for HP MSA P2000 Storage array products starting with the T230 firmware release.

Storage Hardware Primitives for VAAI

In the VMware vSphere 4.1 release, the HP StorageWorks P2000 G3 MSA Array Systems offloa capabilities support the following three primitives:

- Full Copy or Hardware Assisted Move
- Block Zeroing or Hardware Assisted Zeroing
- Hardware Assisted Locking or Atomic Test and Set (ATS)

HP Storage Management Pack for Microsoft System Center

The HP Management Pack for Systems Center Operations Manager provides seamless integratic with Microsoft Systems Center Operations Manager and now System Center Essentials by integrating predefined discovery and state monitoring policies, event processing rules and tasks, and diagram and topology views for the storage system.

For more information:

http://h18000.www1.hp.com/products/quickspecs/14249_div/14249_div.html

HP Storage Management Pack can be downloaded free from the following website:
https://h20392.www2.hp.com/portal/swdepot/displayProductInfo.do?productNumber=SCOM

Snapshot and Volume Copy Software for the P2000 G3

Product Features

Data Protection

- Snapshots create up to 512 point-in-time pictures of data (512 snaps are exclusive to the P2000 G3)
- Volume Copies create up to 128 point-in-time copies of data
- Recovery is instant - revert data from any previous Snapshot or Volume Copy
- Backup 'snapped' data to disk, virtual tape, or physical tape without a backup window
- A 64 snapshot license and Volume Copy are included with all P2000 G3 models.
- Support and updates are desired for bundled software functionalities (such as 64 LTU Snap and/or Volume Copy etc in the P2000 G3 products) a combination HW + SW support care pack must be purchased.
- HP does not provide warranty assistance for software products included with our base hardware products. This would either be SupportPlus or SupportPlus24. The hardware warranty component of these services is accounted for in the pricing of the SP and SP24 care packs.

Data Testing

- Snap or clone data to test the performance of a software application on 'offline' production data
- Snap or clone data to test how a software patch or enhancement will function on 'offline; production dat0061

P2000 G3 Snapshot and Clone:

G3 controllers/models come STANDARD with 64 snapshots and Volume Copy software
512 Snapshot option is ONLY available and supported with the G3, not the prior generation MSA2000 models

HP P2000 Snapshot 512 Software LTU	TA806
HP P2000 Snapshot 512 Software E-LTU	TA806AA

MSA2000 and MSA2000 G2 Snapshot and Volume Copy (clone) software:
Snapshot and Volume Copy software is optional on models other than the P2000 G3.
The following skus are designated for use by the MSA2000 G2 models. They are neither necessa nor available for the P2000 G3 FC.

HP 2000 Modular Smart Array Snapshot 255 Software LTU[1]	T5539
HP 2000 Modular Smart Array Snapshot 64 Software LTU	T5512
HP 2000 Modular Smart Array Snapshot 8 Software LTU	T5513
HP 2000 Modular Smart Array Snapshot 8/255 Upgrade Software LTU[1]	T5540
HP 2000 Modular Smart Array Snapshot 64/255 Upgrade Software LTU[1]	T5541
HP 2000 Modular Smart Array Snapshot 8 to 64 Upgrade Software LTU	T5515
HP 2000 Modular Smart Array Volume Copy Software LTU	T5514

[1] The snapshot software is supported on G2 and G3 models only. 512 snaps only applies to G3 controllers.

HP MSA Recovery Manager Software

Overview	**MSA Recovery Manager (RM) intelligently creates and manages application specific snapshots that can be used to quickly restore application instances or databases. This optional software delivers a standalone solution to augment your existing backup softw strategy. It provides seamless integration with HP P2000 G3 storage hardware. Recovery Manager currently supports Microsoft Exchange and Microsoft SQL. Integrate with HP and 3rd party back up applications, RM provides reliable data recovery. Recov Manager is integrated with Microsoft Volume Shadow Copy Service (VSS) to make non-disruptive point-in-time copies of Microsoft Exchange and Microsoft SQL databases for constant data protection. RM eases costs and administration by providing rapid, affordable online recovery of Microsoft® SQL Server databases from multiple, highly granular point-in-time snapshots. Quickly recover a database to a known point in time, speeding up a variety of operations including rapid recovery of the production SQL ser For more information please visit www.hp.com/go/recoverymanager**	
What's New	• **Support for Microsoft Exchange and Microsoft SQL.** • **Integration with HP and 3rd party backup tool allowing backup to tape and/or disk** • **Instant Recovery designed to respond to your needs for 24x7 application availabil** • **Support on multiple Windows platforms.**	
Models	**HP MSA Recovery Manager Software LTU**	**TC399A**
	HP MSA Recovery Manager Software E-LTU	**TC399AA**
Licensing	• **HP Recovery Manager Software is licensed per single array. One license is required for each array that contains data, specific to applications being supported by RM, intended for backup and recovery scenarios.** • **The above license is applicable for all the applications currently supported.** • **License bought for a specific array may not work on another similar array.** **NOTE:** Electronic software is available in all countries except China and Japan. For China and Japan should order the physical equivalent	

Optional Software

Product Highlights	Features
	• **Creates VSS based Point-In-Time snapshots.** • **Supports mount, deletion of snapshots.** • **Schedules snapshot creation.** • **Single GUI & CLI for managing SQL and Exchange and for performing all management.** • **Auto-discovers applications - SQL and Exchange.** • **Group level (Instance/Storage group) or single database level snapshot creation.** • **Recovery of database based on point-in-time snapshots or media backup.** • **Exchange Database Integrity check using Microsoft utilities.** • **Integrates with HP Data Protector & Symantec Netbackup for Media Backup & recovery.** • **Supports 2 types of recovery:** • **Volume Recovery** • **File Copy Recovery** • **Supports recovery from tape backup.** • **Supports snapshot policy management (snapshot rotation).** • **Supports Microsoft Cluster Server (MSCS), Cluster Continuous Replication (CCR) and Data Availability Group (DAG) environments.** **Applications and Platform** • **Supports SQL 2005, 2008 & R2, Exchange 2007, 2010.** • **Supports Windows platforms as supported by the above applications.** **Supports P2000 G3 (FC/ISCSI/SA).**

HP P2000 Remote Snap Software (G3 FC and FC/iSCSI, 1GbE and 10GbE iSCSI controllers only)

- HP P2000 Remote Snap Software is array based software that provides remote replication on the HP P2000 G3 MSA Array products (except SAS model). HP Remote Snap is a form of asynchronous replication which consists of replication of block-level data from a volume on a local system to a volume that may be on the same system or on a second independe system. This second system may be collocated with the first system or may be located at remote site. It requires T230Rxx controller firmware or higher.
- HP Remote Snap functionality is based on existing Snapshot technology offered by HP P2000 SAN Array products. Snapshots are used to track the data to be replicated as well to determine the differences in data updated on the master volume, minimizing the amount of data to be transferred.
- HP Remote Snap replication technology provides the ability to accomplish key data management and protection capabilities. First, because Remote Snap uses snapshots as the underlying technology it creates multiple local recovery points which can be used for such tasks as to complement daily backups; second, replication provides the ability to access data in a remote site which could be used for dispersed operations; and third but definitely not least important replication allows for business continuance in the event of a failure on the primary site.
- In order to perform a replication, a snapshot of the volume to be replicated is taken, creatin a point-in-time image of the data. This point-in-time image is then replicated to the destination volume by copying the data represented by the snapshot via a transport mediur such as TCP/IP (iSCSI) or Fibre Channel. The amount of data transferred is minimized though the use of snapshots whenever possible.

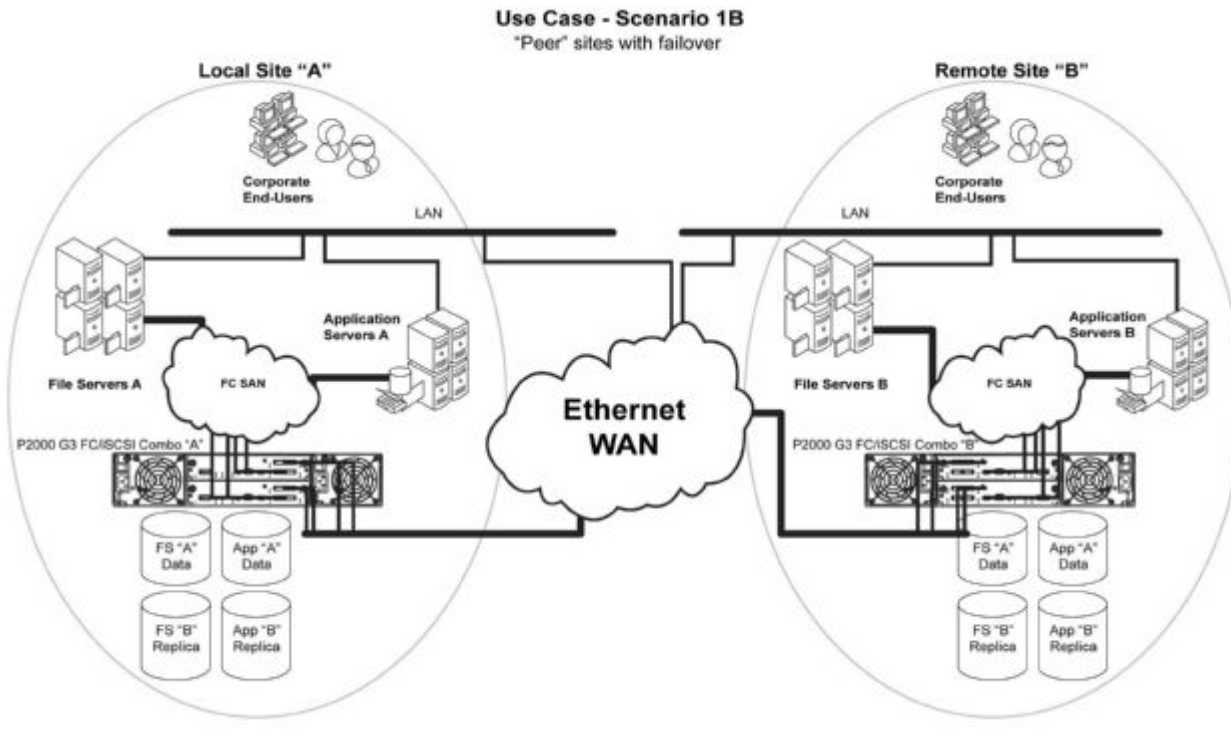
HP P2000 Array System Remote Snap Software LTU	TA808
HP P2000 Array System Remote Snap Software E-LTU	TA808AA

(**NOTE:** One license per array is required for replication. For example, if you have two P2000 arrays performing replication (from Primary system to Remote System), you will need 2 licenses).

Optional Software

Product Features

- Storage based asynchronous snapshot replication
- Initial copy of data can be performed locally, reducing burden on wide area networks
- Support of both Ethernet and Fiber Channel interconnects provides flexible options to the application environments.
- Snapshot based replication technology means only changed data will be replicated to alternate site
- Many to 1 replication (up to 4 nodes) - primary use case is to replicate from "many" branch offices to the home office for the purpose of backing up data from the branches
- Single controller to single controller replication
- Mixed controller replication - replication between P2000 G3 Fibre Channel and P2000 G3 FC/iSCSI Combo arrays
- Advanced scheduler provides several options to IT administrators for business continuance
- Flexible architecture allows remote replication between P2000 G3 Fibre Channel and/or P2000 G3 FC/iSCSI Combo arrays. You can also join dissimilar controllers; for instance a Combo controller can snap remotely to a 1 or 10 GbE iSCSI array. Protects existing investments and enhances business continuity planning objectives.
- Replication Wizard simplifies the task of setting up and establishing replication pairs from one unified, easy to use GUI.
- Snapshot based replication enables both local and remote recovery depending on the need Snapshot replication isolates problems to a specific point in time which can be selected by the administrator. Additionally snapshot replication supports longer distance replication.
- Multiple relationships provide greater storage flexibility and utilization.
- Bundled 64 Snapshots and Volume Copy integration provides better efficiencies by combining the management and array technologies to create local copies.
- Fast application recovery with minimal or no transaction loss
- Creation of disaster tolerant copies of your critical business data
- No-single-point-of-failure solution to increase the availability of your customers data



Customer Benefits

Disaster Recovery

Replication technology has typically been used to address disaster recovery issues. Disaster recovery is still the driving business case behind replication. Remote replication can be implemented from the production site to one or more remote sites across a campus, across town across a state or across the country. When a disaster strikes the primary location, the applicatic can be brought up at the remote site and continue processing against the replicated copies. Whe

the primary site is back online, the replication can be reversed and when the data is resynchronized, processing can be switched back to the primary site and business can continue In the past, if an e-mail system experienced a disaster it was an "oh well" moment. The loss of a day or more of e-mail was not considered important. Today, e-mail is a critical component of mar companies' business plans and recovering e-mail after a disaster quickly and completely is required.

Maintenance

HP Remote Snap software can also be used to solve other business needs. For instance, E-mail servers may need periodic maintenance that can take hours to complete. With remote replicatior in place, the downtime can be minimal (as long as it takes to bring the remote peer of the primar e-mail server online). The primary server can be worked on (patches, hardware upgrades, etc.) and then brought back online and into production. A whole datacenter can be failed over to a remote site on purpose to perform maintenance on generators, air conditioning, etc. Replication can also be used to perform a datacenter move with minimal downtime (fail everything to the DR site, move the production datacenter to its new location then fail the DR site back to the new datacenter).

Storage Based

Data replication is performed at the storage subsystem controller level and is totally transparent t the host, alleviating unnecessary host cycles to perform the data mirroring functions. Unlike a fabric based or host based solution, the storage based solution dedicates its resources to managing the replication process between arrays, with minimal impact to applications, other data or devices on the SAN.

Bi-Directional

The bidirectional HP P2000 Array solution addresses the growing need among businesses to ensure continuous availability of applications that are critical to daily business operations. HP P2000 enables two sites in a remote replication connection to use each other as a destination to maintain replicated copies of online data. This maximizes resource utilization while enabling business continuance, even in the event of disaster.

Disaster Tolerance

The P2000 G3 FC products utilize snapshot data online and in real time to a remote P2000 G3 through a local or extended storage area network (SAN). Additionally, data replication can be bidirectional, meaning that a storage array can be both a source and a destination. A particular LUN can be replicated in only one direction between the two storage arrays. Write I/O data sent t the source is replicated by HP P2000 Array to the destination. A pair of properly configured HP P2000 G3 FC arrays is a replication solution that guarantees data integrity in the event of a storage system or site failure.

Normalization (first initial copy)

When a DR site is initially created a normalization or initial copy of the data from the source volume to the target volume must occur. The P2000 G3 array allows this first copy to take place locally. After completion the disks can me manually moved to the remote location. Subsequent changes will only remotely copy the changed blocks.

SAN Extensions

HP P2000 G3 Array provides the capability to replicate data over direct Fibre Channel. The distances supported over dark fiber are determined by the speed of the dark fiber connection and the technology used to communicate over the dark fiber.

Path failover (MPIO)

MPIO for Windows provides a single multi-path solution for HP P2000 G3 Modular Smart Array or HP servers.
Support for Windows 2003 and Windows 2003 R2 operating systems is provided by HP MPIO Fu Featured DSM. For the P2000 G3 this version is 2.6.1.7 or greater.
Support for Microsoft Windows 2008 is bundled within the operating system
Support for Linux distributions is with Device Mapper 4.4.0 or greater.
Support for HPUX is native multipathing in HP-UX v3 and PV-Links in HP-UX v2.

Optional Software

HP X3000 G2 Network Storage Gateways

Add more value to your P2000 array

Stretch your P2000 array investment by adding file services, iSCSI connectivity, print, and management hosting with an X3000 G2 Series Network Storage Gateway platform. X Series Network Storage Gateways are optimized NAS gateways, that are built on industry-standard HP ProLiant servers and Microsoft's Windows Storage Server 2008 R2 operating system pre-installed Since they're Windows-based, network integration is easy, your Windows tools and data protecti applications run right on the box, and management has a familiar look and feel. The X3000 G2 gateways support a wide range of file serving protocols including SMB, NFS, iSCSI, FTP, HTTP and WebDAV for heterogeneous IT environments.

HP X3400 G2 Network Storage Gateway BV870A
HP X3800 G2 Network Storage Gateway BV871A

NOTE: For more information visit: www.hp.com/go/X3000

HP P2000 G3 Carrier-Grade Components

The P2000 G3 is an 8 Gb Fibre Channel connected 2U storage area network (SAN) or direct connect solution designed for network equipment providers (NEPs) and communication service providers. Suited for those who need a robust telecom infrastructure--- they need storage devices to catch videos, photos, text, new services --- and need a place to have the data stored and cached.

The HP P2000 Carrier-Grade Chassis (AP841A (Retiring SKU) or AP841B (RoHS Compliant SKU)) is a controller-less 6Gb chassis capable of supporting one or two P2000 G3 8Gb Fibre Channel controllers (AP836A (Retiring SKU) or AP836B (RoHS Compliant SKU)) and has twenty-four Small Form Factor (SFF) drive bays. It comes equipped with two DC-power power supplies.

The HP P2000 2.5-in Dual I/O JBOD is a special model disk enclosure designed only for use with the carrier-grade array heads. It has 24 drive bays (unlike the D2700 with 25 drive bays) and has dual DC-power supplies. It is only sold with a carrier grade array. Five of these JBODs may be cascaded from the array head.

When used in conjunction with specific ProLiant SFF SAS drives, the solution is NEBS certified. NEBS level-3 certification provides the assurance that the equipment is safe to operate and sturd enough to withstand certain physical and environmental (for example, fire, earthquakes) conditions. For Seismic Zone 4 rating, the P2000 must be mounted in an HP Seismic Rack (AH335A)

HP P2000 Remote Snap Software (G3 FC and FC/iSCSI, 1GbE and 10GbE iSCSI controllers only)

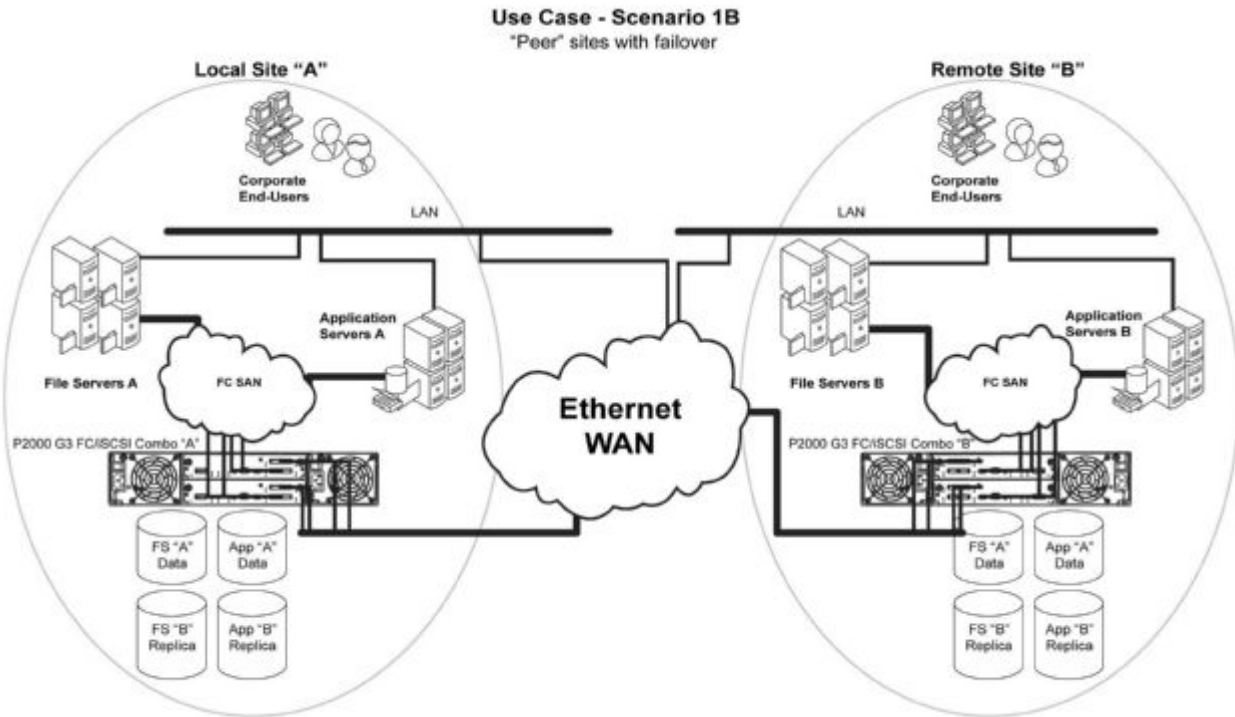
- HP P2000 Remote Snap Software is array based software that provides remote replication on the HP P2000 G3 MSA Array products (except SAS model). HP Remote Snap is a form of asynchronous replication which consists of replication of block-level data from a volume on a local system to a volume that may be on the same system or o a second independent system. This second system may be collocated with the first system or may be located at a remote site. It requires T230Rxx controller firmware or higher.
- HP Remote Snap functionality is based on existing Snapshot technology offered by HP P2000 SAN Array products. Snapshots are used to track the data to be replicated as we as to determine the differences in data updated on the master volume, minimizing the amount of data to be transferred.
- HP Remote Snap replication technology provides the ability to accomplish key data management and protection capabilities. First, because Remote Snap uses snapshots a the underlying technology it creates multiple local recovery points which can be used for such tasks as to complement daily backups; second, replication provides the ability to access data in a remote site which could be used for dispersed operations; and third but definitely not least important replication allows for business continuance in the event of a failure on the primary site.
- In order to perform a replication, a snapshot of the volume to be replicated is taken, creating a point-in-time image of the data. This point-in-time image is then replicated to the destination volume by copying the data represented by the snapshot via a transport medium such as TCP/IP (iSCSI) or Fibre Channel. The amount of data transferred is minimized though the use of snapshots whenever possible.

HP P2000 Array System Remote Snap Software LTU	TA808
HP P2000 Array System Remote Snap Software E-LTU	TA808AA

(**NOTE:** One license per array is required for replication. For example, if you have two P2000 arrays performing replication (from Primary system to Remote System), you will need 2 licenses).

Product Features

- Storage based asynchronous snapshot replication
- Initial copy of data can be performed locally, reducing burden on wide area networks
- Support of both Ethernet and Fiber Channel interconnects provides flexible options to the application environments.
- Snapshot based replication technology means only changed data will be replicated to alternate site
- Many to 1 replication (up to 4 nodes) - primary use case is to replicate from "many" branch offices to the home office for the purpose of backing up data from the branches
- Single controller to single controller replication
- Mixed controller replication - replication between P2000 G3 Fibre Channel and P2000 G3 FC/iSCSI Combo arrays
- Advanced scheduler provides several options to IT administrators for business continuance
- Flexible architecture allows remote replication between P2000 G3 Fibre Channel and/or P2000 G3 FC/iSCSI Combo arrays. You can also join dissimilar controllers; for instance Combo controller can snap remotely to a 1 or 10 GbE iSCSI array. Protects existing investments and enhances business continuity planning objectives.
- Replication Wizard simplifies the task of setting up and establishing replication pairs from one unified, easy to use GUI.
- Snapshot based replication enables both local and remote recovery depending on the need. Snapshot replication isolates problems to a specific point in time which can be selected by the administrator. Additionally snapshot replication supports longer distance replication.
- Multiple relationships provide greater storage flexibility and utilization.
- Bundled 64 Snapshots and Volume Copy integration provides better efficiencies by combining the management and array technologies to create local copies.
- Fast application recovery with minimal or no transaction loss
- Creation of disaster tolerant copies of your critical business data
- No-single-point-of-failure solution to increase the availability of your customers data



Optional Software

Customer Benefits

Disaster Recovery

Replication technology has typically been used to address disaster recovery issues. Disaster recovery is still the driving business case behind replication. Remote replication can be implemented from the production site to one or more remote sites across a campus, across town, across a state or across the country. When a disaster strikes the primary location, the applications can be brought up at the remote site and continue processing against the replicat copies. When the primary site is back online, the replication can be reversed and when the da is resynchronized, processing can be switched back to the primary site and business can continue. In the past, if an e-mail system experienced a disaster it was an "oh well" moment. The loss of a day or more of e-mail was not considered important. Today, e-mail is a critical component of many companies' business plans and recovering e-mail after a disaster quickly and completely is required.

Maintenance

HP Remote Snap software can also be used to solve other business needs. For instance, E-mail servers may need periodic maintenance that can take hours to complete. With remote replication in place, the downtime can be minimal (as long as it takes to bring the remote peer the primary e-mail server online). The primary server can be worked on (patches, hardware upgrades, etc.) and then brought back online and into production. A whole datacenter can be failed over to a remote site on purpose to perform maintenance on generators, air conditioning, etc. Replication can also be used to perform a datacenter move with minimal downtime (fail everything to the DR site, move the production datacenter to its new location then fail the DR site back to the new datacenter).

Storage Based

Data replication is performed at the storage subsystem controller level and is totally transparer to the host, alleviating unnecessary host cycles to perform the data mirroring functions. Unlike fabric based or host based solution, the storage based solution dedicates its resources to managing the replication process between arrays, with minimal impact to applications, other data or devices on the SAN.

Bi-Directional

The bidirectional HP P2000 Array solution addresses the growing need among businesses to ensure continuous availability of applications that are critical to daily business operations. HP P2000 enables two sites in a remote replication connection to use each other as a destination maintain replicated copies of online data. This maximizes resource utilization while enabling business continuance, even in the event of disaster.

Disaster Tolerance

The P2000 G3 FC products utilize snapshot data online and in real time to a remote P2000 G3 through a local or extended storage area network (SAN). Additionally, data replication can be bidirectional, meaning that a storage array can be both a source and a destination. A particula LUN can be replicated in only one direction between the two storage arrays. Write I/O data se to the source is replicated by HP P2000 Array to the destination. A pair of properly configured HP P2000 G3 FC arrays is a replication solution that guarantees data integrity in the event of a storage system or site failure.

Normalization (first initial copy)

When a DR site is initially created a normalization or initial copy of the data from the source volume to the target volume must occur. The P2000 G3 array allows this first copy to take plac locally. After completion the disks can me manually moved to the remote location. Subsequen changes will only remotely copy the changed blocks.

SAN Extensions

HP P2000 G3 Array provides the capability to replicate data over direct Fibre Channel. The distances supported over dark fiber are determined by the speed of the dark fiber connection and the technology used to communicate over the dark fiber.

Path failover (MPIO)

MPIO for Windows provides a single multi-path solution for HP P2000 G3 Modular Smart Array on HP servers.
Support for Windows 2003 and Windows 2003 R2 operating systems is provided by HP MPIO

Full Featured DSM. For the P2000 G3 this version is 2.6.1.7 or greater.
Support for Microsoft Windows 2008 is bundled within the operating system
Support for Linux distributions is with Device Mapper 4.4.0 or greater.
Support for HPUX is native multipathing in HP-UX v3 and PV-Links in HP-UX v2.

HP X3000 G2 Network Storage Gateways

Warranty

Three-year limited warranty, parts exchange Next Business day delivery

Enclosures, Hard drives, and Options for the P2000 G3 FC carry their own warranty. Refer to HP Limited Warranty Statement for more information.

The P2000 G3 FC has been designed with customer self repairable parts to minimize repair time and provide greater flexibility in performing defective parts replacement. Please refer to HP's limited warranty Statement and parts replacement instructions for further details.

http://h18006.www1.hp.com/products/storageworks/warranty.html

Products included in various kits carry their own individual warranties.

NOTE: The warranty of the hard drive options purchased with the P2000 G3 FC, SAS, and 10Gb iSCSI products is different for SAS hard drives versus SAS MDL and SATA hard drives. SAS har drive options have a three year warranty and SAS MDL and SATA hard drives options have a one year warranty.

Technology Services

Technology Services for increased uptime, productivity and ROI
TRUST HP storage technology experts for every level of service and support. Our integrated portfolio of Services for storage help customers reduce costs, optimize data, streamline storage management, and improve backup and recovery. Capitalizing on HP Storage Systems' capabiliti requires a service partner who understands your increasingly complex environment. Team with the people who know HP infrastructure hardware and software best-the experienced professional at HP Services.

Protect your business beyond warranty
Warranty protects against manufacturer defects, however warranty uplifts, such as HP Care Pac Services protect the business-by reducing downtime risks and providing operational consistency for mission-critical and standard business computing.

What HP Storage Technology Services can do for you
HP Storage Technology Services can help you design, deploy, test, integrate, support, and manage IT and infrastructure solutions. HP storage lifecycle support services offers a full spectrum of customer care-from technology support to complex migrations to complete manage services.

Support:

Choose from three levels of care for your HP MSA Storage environment. HP Technology Services are personalized. You decide how, when, and where you receive support for your HP MSA Array Systems. Our approach is proactive, leveraging products, tools, and technology to avoid problems and optimize performance. And our portfolio is simplified-with straightforward choices to reduce complexity and risk, plus a single point of contact you can count on throughou the support lifecycle.

Optimized care -Maintain optimum levels of storage performance and availability: HP Proactive Care 24x7 with 40 HP Proactive Select service credits per year -Specifically designed for complex environments, this end-to-end environment support solution covers servers, operating systems, hypervisors, storage, and storage area networks (SANs). We provide rapid response to incidents, addressed 24x7x365 through HP advanced solution center support plus proactive reports for problem prevention. Choose from an extensive menu of HP Proactive Select event and technical services, such as onsite firmware upgrades, health checks, assessments, and education.

Standard care -Maintain high levels of storage availability: HP Proactive Care 24x7 with 3(Proactive Select service credits per year - Specifically designed for complex environments, this end-to-end environment support solution covers servers, operating systems, hypervisors, storage and SANs. We provide rapid response to incidents, addressed 24x7x365 through HP's advanced

solution center support plus proactive reports for problem prevention. Choose from an extensive menu of HP Proactive Select event and technical services, such as onsite firmware upgrades, health checks, assessments, and education.

Basic care-Maintain storage with basic recommended support levels: HP Support Plus 24 with 10 Proactive Select service credits per year - This support service is designed for environments where proactive help from HP is not required. HP provides 24x7 hardware and software support onsite, including third-party support with a maximum 4-hour onsite response. W also provide cost-saving software updates and monitor ongoing operations through the latest remote tools. Choose from an extensive menu of HP Proactive Select event and technical services, such as onsite firmware upgrades, health checks, assessments, and education.

Installation

Implement right from the start: Support that's included whatever levels of care you sele HP MSA Storage Installation and Startup Service - HP installs, tests, and configures your tape hardware and software onsite. We deliver a tailored storage deployment, properly integrated into your environment.

Additional services to meet your needs

HP Data Migration Services -HP expertise and tools help you migrate data across your data center or around the globe. Take the burden of migration off your shoulders and put it in the capable hands of expert HP storage migration consultants. Our proven approach helps orchestrate the complete data migration and consolidation process while maintaining consistent data availability during the transfer process.

HP Proactive Select -HP Proactive Select is a flexible way to purchase services to fit your particular environment or situation. Working with an HP Account Support Manager, you select a package of services in the form of services credits that include proactive services spanning many technologies and processes, such as onsite firmware upgrades, health checks, assessments, a education. You tailor the service delivery to improve time to production, optimize performance, or build in continuous improvements.

For more information

Only HP brings together deep expertise, proactive and business critical support and a strong partner network-plus, a full set of infrastructure services designed to power a Converged Infrastructure.

To learn more on HP Storage Services, please contact your HP sales representative or HP Authorized Channel Partner

- HP Care Pack Services are sold by HP and HP Authorized Service Partners:
  - Services for customers purchasing from HP or an enterprise reseller are quoted usin HP order configuration tools.
  - Customers purchasing from a commercial reseller can find HP Care Pack Services a www.hp.com/go/lookuptool

Configure to Order Program Information

HP has a very successful Configure to Order program for the P2000 G3 family The P2000 G3 models and options may or may not be factory installed in a rack with add-on controllers, switches, P2000 disk enclosures and hard drives. The P200(G3 arrays may be integrated with ProLiant servers or as standalone storage.
Orders to be shipped through the CTO process must have a minimum of two drives of the same type (SAS, SAS MDL, or SATA) ordered per controller. SAN Starter Kits are not eligible for CTO.

	HP 900GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	619291-B2
	HP 72GB 6G SAS 15K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	512545-B2
	HP 146GB 6G SAS 15K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	512547-B2
	HP P2000 300GB 6G SAS 15K rpm LFF Dual Port Enterprise Hard Drive	AP858
	HP 1TB 6G SAS 7.2K rpm SFF (2.5-inch) Dual Port Midline 1yr Warranty Hard Drive	605835-B2
	HP 500GB 6G SAS 7.2K rpm SFF (2.5-inch) Dual Port Midline 1yr Warranty Hard Drive	507610-B2
	HP 500GB 3G SATA 7.2K rpm SFF (2.5-inch) Midline 1yr Warranty Hard Drive	507750-B2
	NOTE: Go to the HP Hard Drive Compatibility table for complete drive compatibility information (http://www.hp.com/products/harddiskdrives). Using hard drives in unsupported configurations will result in voiding the warranty and could result in damage to the drive and/or loss of data.	

Configuration Information

Step 1 - P2000 G3 - Base Configuration

Select one:

Model Name	Retiring SKUr	RoHS Compliant SKU
HP P2000 Modular Smart Array 3.5-inch Drive Bay Chassis • Controller-less chassis with twelve Large Form Factor (LFF) drive bays. Space for two controllers.	AP838A	AP838B
HP P2000 Modular Smart Array 2.5-inch Drive Bay Chassis • Controller-less chassis with twenty-four Small Form Factor (SFF) ProLiant drives bays. Space for two controllers.	AP839A	AP839B

There are two array-head chassis - one with twelve 3.5-inch large form factor bays, the other with twenty-four 2.5-inch sma form factor drive bays. For an additional twelve drive bays purchase a P2000 3.5-inch Disk Enclosure. You may attach a total of seven P2000 Drive Enclosures for a total of ninety-six LFF drive bays. For 25 additional SFF drive bays purchase D2700 JBOD. You may attach a total of five D2700 JBODs for a total of one hundred and forty nine SFF drive bays. Dual I/O modules JBODS support both single and dual controller arrays.

Step 2 - Options

Select each option with quantities specified.

Step 2a - Options

Quantity	Description with Parts Shipped:	Retiring SKU	RoHS Compliant SK
1 or 2	HP P2000 G3 MSA Fibre Channel Controller **NOTE:** for either the LFF or SFF P2000 or the two DC-powered chassis	AP836A	AP836B
1 or 2	HP P2000 G3 MSA FC/iSCSI Combo Modular Smart Array Controller **NOTE:** for either the LFF or SFF P2000 or the two DC-powered chassis	AP837A	AP837B
1 or 2	HP P2000 G3 SAS MSA Array System Controller **NOTE:** for either the LFF or SFF P2000 or the two DC-powered chassis	AW592A	AW592B
1 or 2	HP P2000 G3 10GbE iSCSI MSA Array System Controller **NOTE:** for either the LFF or SFF P2000 or the two DC-powered chassis	AW595A	AW595B
1 or 2	HP P2000 G3 iSCSI MSA Array System Controller **NOTE:** for either the LFF or SFF P2000 or the two DC-powered chassis	BK829A	BK829B

Step 2b - SAS and SATA Drive Options

NOTE: SATA drives are designed for archival or reference data. They should not be used in a heavy or intense I/O environment. Those situations require the use of enterprise-class SAS drives. P2000 3.5-inch drives are for use only with P2000 products.

P2000 Large Form Factor (LFF) SAS drives for P2000 G3 FC and P2000 3.5-inch Disk Enclosure

HP P2000 300GB 6G SAS 15K rpm LFF Dual Port Enterprise Hard Drive	AP858A
HP P2000 450GB 6G SAS 15K rpm LFF Dual Port Enterprise Hard Drive	AP859A
HP P2000 600GB 6G SAS 15K rpm LFF Dual Port Enterprise Hard Drive	AP860A

P2000 Large Form Factor (LFF) SAS MDL DP drives for P2000 G3 FC and P2000 3.5-inch Disk Enclosure

HP P2000 1TB 6G SAS 7.2K LFF (3.5-inch) Dual Port MDL Hard Drive	AP861A
HP P2000 2TB 6G SAS 7.2K LFF (3.5-inch) Dual Port MDL Hard Drive	AW555A
HP P2000 3TB 6G SAS 7.2K 3.5 in MDL HDD	QK703A

NOTE: Before installing 3TB HDDs in an P2000 G3 Array please update P2000 array controller firmware to version TS230Rxxx or later

MSA2 Large Form Factor (LFF) SATA drives for P2000 array head an P2000 disk enclosure

HP MSA2 1TB 7.2K rpm 3.5 inch Dual-port SATA Hard Disk Drive	AJ740A	AJ740B
HP P2000 2TB 3G SATA 7.2K LFF MDL Hard Drive	AW556A	AW556B

ProLiant Small Form Factor (SFF) SAS drives for P2000 G3 Array (24 drive bay) and the D2700 JBOD (25 drive ba

HP 146GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	507125-B21
HP 300GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	507127-B21
HP 450GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	581284-B21
HP 600GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	581286-B21
HP 900GB 6G SAS 10K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	619291-B21
HP 72GB 6G SAS 15K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	512545-B21
HP 146GB 6G SAS 15K rpm SFF (2.5-inch) Dual Port Enterprise 3yr Warranty Hard Drive	512547-B21
HP 300GB 6G SAS 15K rpm SFF (2.5-inch) Hot Plug Enterprise 3 yr Warranty Hard Drive	627117-B21

ProLiant Small Form Factor (SFF) SAS MidLine drive for P2000 G3 Array (24 drive bay) and the D2700 JBOD (25 drive bay)

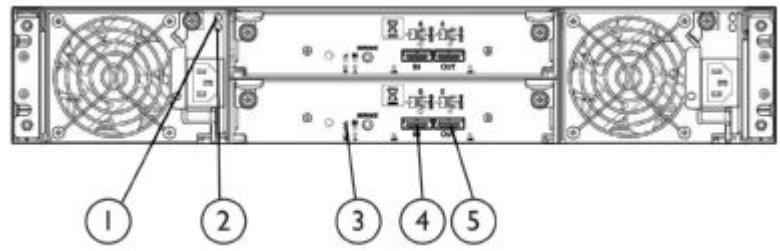
HP 500GB 6G SAS 7.2K rpm SFF (2.5-inch) Dual Port Midline 1yr Warranty Hard Drive	507610-B21
HP 1TB 6G SAS 7.2K rpm SFF (2.5-inch) Dual Port Midline 1yr Warranty Hard Drive	605835-B21

ProLiant Small Form Factor (SFF) SATA MidLine drive for P2000 G3 Array (24 drive bay) and the D2700 JBOD (2 drive bay)

(**NOTE:** SFF SATA drives are single ported and therefore do not have a fail-over path intrinsic to their design)

HP 500GB 3G SATA 7.2K rpm SFF (2.5-inch) Midline 1yr Warranty Hard Drive	507750-B21

Step 2c - Drive Enclosure Options



P2000 Dual I/O 3.5-inch 12 Drive Enclosure

Rear Panel components

1. Power Indicator
2. Fault Indicator
3. Unit Locator
4. SAS In Port
5. SAS Out Port

Use either disk enclosure with Large or Small Form Factor, single or dual controller array heads. Each ship with two .5m mini-SAS to mini-SAS cables.

	Retiring Part Number	New Part Number
HP P2000 Dual I/O 3.5-inch 12 Drive Disk Enclosure	AP843A	AP843B
HP D2700 Dual I/O 2.5-inch 25 Drive Disk Enclosure	AJ941A	AJ941A
HP P2000 LFF Drive Enclosure I/O Module **NOTE:** Only used in conjunction with the P2000 blank chassis (AP838A) if a single I/O disk enclosure is desired. No cable included)	AP844A	AP844B

Step 2c - SAS Cable Options

miniSAS to miniSAS Cables:
Connecting P2000 G3 FC or SAS controller to a JBOD if a longer cable is desired. Also used for attaching the P2000 G3 SAS host ports to servers

HP Ext miniSAS to miniSAS 2m Cable	407339-B21

Step 3 - Other P2000 G3 Options

Choose optional AC Power Cords (2 required)
NOTE: Two PDU cables: one 142263-008 (Black) and one 1422633-013 (Grey), ship standard with all AC-powered enclosures.

Power Cord, 220/240 VAC, (US/Canada/Mexico)	227099-00
Power Cord, (Australia/China/New Zealand)	227098-00
Power Cord, (Central Europe)	157215-00
Power Cord, (United Kingdom/Hong Kong)	157216-00
Power Cord, (Switzerland)	157219-00
Power Cord, (Italy)	157217-00
Power Cord, (Denmark)	157218-00
Power Cord, (Japan)	139867-00
Power Cord, (South East Asia/India)	157220-00

Step 4a - Choose Supported Options For Fibre Channel Infrastructure

Fibre Channel Host Bus Adapters - X86 servers	Model	Description	Retiring SKU	RoHS Compliant SKU

	BladeSystem c-Class Fibre Channel Mezzanine HBAs		
	QLogic QMH2562 8Gb FC HBA for HP c-Class BladeSystem	451871-B21	
	HP BLc Emulex LPe1205- 8Gb FC HBA for HP c-Class BladeSystem	456972-B21	
	Lpe1105-HP 4Gb FC HBA for HP c-Class BladeSystem	403621-B21	
	QMH2462 4Gb FC HBA for HP c-Class BladeSystem Windows and Linux	403619-B21	
	Brocade 804 8Gb FC HBA for HP BladeSystem c-Class, Windows, VMware, Linux	590647-B21	
	Fibre Channel HBAs		
	NOTE: Please visit www.hp.com/go/fchba for product details and www.hp.com/storage/spock for compatibility details.		
	Brocade Fibre Channel HBAs		
	HP 81B PCI-e FC HBA Single Port	AP769A	AP769B
	HP 82B PCI-e FC HBA Dual Port	AP770A	AP770B
	HP 41B 4Gb PCI-e FC HBA	AP767A	AP767B
	HP 42B 4Gb Dual-Port PCI-e FC HBA	AP768A	AP768B
	Emulex Fibre Channel HBAs		
	HP 81E PCI-e FC HBA Single Port	AJ762A	AJ762B
	HP 82E PCI-e FC HBA Dual Port	AJ763A	AJ763B
	HP FC2142 4Gb PCI-e HBA	A8002A	A8002B
	HP FC2242 Dual Channel 4Gb PCI-e HBA	A8003A	A8003B
	QLogic Fibre Channel HBAs		
	HP 81Q PCI-e FC HBA Single Port	AK344A	
	HP 82Q PCI-e FC HBA Dual Port	AJ764A	
	HP FC1142 4Gb PCI-e HBA	AE311A	
	HP FC1242 Dual Channel 4Gb PCI-e HBA	AE312A	
Fibre Channel Host Bus Adapters - Integrity servers	**Integrity**	HP PCI-X 2.0 1-port 4Gb Fibre Channel HBA	AB378B
		HP PCI-X 2.0 2-port 4Gb Fibre Channel HBA	AB379B
		HP PCIe 2-port 4Gb Fibre Channel HBA	AD300A
		HP PCIe 1-port 4Gb Fibre Channel HBA	AD299A
		HP PCI Express 2-port 4Gb Fibre Channel HBA	AD355A
		HP PCIe 1-port 4Gb and 1-port 1000BT Adapter	AD221A
		HP PCIe 2-port 4Gb and 2-port 1000BT Adapter	AD222A
		HP PCIe 2-port 4Gb and 2-port 1000BSX Adapter	AD393A
		HP PCI-X 1-port 4Gb FC and 1-port 1000BT Adapter	AD193A
		HP PCI-X 2-port 4Gb FC and 2-port 1000BT Adapter	AD194A
		HP PCI Express 1-port 8Gb Fibre Channel SR (QLogic) Adapter	AH400A
		HP PCI Express 2-port 8Gb Fibre Channel SR (QLogic) Adapter	AH401A
		HP PCIe 1-port 8Gb Fibre Channel HBA	AH402A
		HP PCIe 2-port 8Gb Fibre Channel HBA	AH403A
	Integrity server blades	Emulex LPe1105 4Gb Fibre Channel Host Bus Adapter for c-Class BladeSystem	403621-B21

	QLogic QMH2462 4Gb Fibre Channel Host Bus Adapter for c-Class BladeSystem	403619-B21
	QLogic QMH2562 8Gb Fibre Channel Host Bus Adapter for c-Class BladeSystem	451871-B21
	Emulex LPe1205 8Gb Fibre Channel Host Bus Adapter for c-Class BladeSystem	456972-B21

Fibre Channel Switches	HP 8/8 Base SAN Switch	AM866A	AM866B

Step 4b - Choose Supported Options For 10GbE Infrastructure

- verify that the cable/transceiver is supported with the connecting device (i.e. switch or NIC/iSCSI HBA)

Copper Cable	HP 0.5m SFP+ 10GbE Copper Cable	487649-B21
	HP 1m SFP+ 10GbE Copper Cable	487652-B21
	HP 3m SFP+ 10GbE Copper Cable	487655-B21
	HP 5m SFP+ 10GbE Copper Cable	537963-B21
	HP 7m SFP+ 10GbE Copper Cable	487658-B21
SFP	HP BladeSystem 10Gb SR SFP+	455883-B21
	HP BladeSystem 10Gb LRM SFP+	455889-B21
	HP ProCurve 10-GbE SFP+ 1m Direct Attach Cable	J9281B
	HP ProCurve 10-GbE SFP+ 3m Direct Attach Cable	J9283B
	HP ProCurve 10-GbE SFP+ 7m Direct Attach Cable	J9285B
	HP ProCurve 10-GbE SFP+ SR Transceiver	J9150A
	HP ProCurve 10-GbE SFP+ LRM Transceiver	J9152A
NIC	HP NC522SFP Dual Port 10GbE Server Adapter	468332-B21
	HP NC524SFP Dual Port 10GbE Module	489892-B21
	HP NC550SFP Dual Port 10GbE Server Adapter	581201-B21
	HP NC522m Dual Port Flex -10 10GbE Multifunction BL-c Adapter	467801-B21
	HP NC532m 10GbE Dual Port Flex-10 10GbE Multifunction BL-c Adapter	467799-B21

	HP NC550m 10Gb 2-port PCIe x8 Flex-10 Ethernet Adapter	581204-B21
iSCSI HBA - standup	Qlogic QLe4062c	Reference sell
iSCSI HBA - mezz	HP BLc QLogic iSCSI Dual Port Adapter with Virtual Connect Kit	488074-B22
NIC - mezz	HP NC522m Dual Port 10GbE Multifunction BL-c Adapter	467801-B21

Step 4c - Choose Supported Options For SAS connection

HP SC08e 6Gb SAS HBA for G6 and G7 rack servers	614988-B21
HP H221 Host Bus Adapter for Gen8 servers	650931-B21
HP Smart Array P712m Controller/256 for Server Blades	488348-B21
HP Smart Array P711m Controller/1 for Server Blades	513778-B21
HP 6Gb/s SAS BL Switch - Single Pack for BladeSystems	BK763A
HP 6Gb/s SAS BL Switch - Dual Pack for BladeSystems	BK764A
HP Ext Mini SAS 2M cable	407339-B21
HP Ext Mini SAS 4m cable - (only be used when connecting a SAS HBA or 6Gb SAS switch to a SAS controller. Connecting it to disk enclosures is not supported.)	432238-B21

Step 5 - Choose Rack Options

Please refer to the HP Infrastructure products page for more information on HP racks and rack options or the HP 10000 G2 Series Rack QuickSpec.
http://h18004.www1.hp.com/products/servers/platforms/rackandpower.html
http://h18000.www1.hp.com/products/quickspecs/12402_div/12402_div.HTML

P2000 G3 FC **P2000 G3 FC/iSCSI** **P2000 G3 SAS** **P2000 G3 10GbE iSCSI** **P2000 G3 iSCSI (1Gb)**	**POWER REQUIREMENTS**	
	Input Power Requirements (typical-running I/O) SFF/LFF arrays	• 8G FC (2 Port - 8G FC) 110VAC 3.32A, 344-390 W; 220VAC 1.61A,374-432W • FC/iSCSI Combo (2 Port - 8G FC + 2 Port -1G iSCSI) 110VAC; 3.64A,357-418W, 220VAC 1.77 A, 365-424W • 6G SAS (4 Port - 6G SAS) 110VAC 3.49A,344-390W, 220VAC 1.7A 374-432W • 10GbE iSCSI (2 Port - 10 GbE iSCSI) 110VAC 3.67A, 395W, 220VAC,1.95A 388.2W • 1G iSCSI (4 Port - 1GbE iSCSI) 110VAC 3.3A 363W, 220VAC, 1.63A 360W
	Max Input Power	100-240 VAC, 50/60 Hz., 4.5-1.9A; 48-60 VDC 10.4A/8.3A
	Heat Dissipation	1622 BTU/hr
	TEMPERATURE AND HUMIDITY RANGES	
	Operating Temperature	41°F to 104°F (5°C to 40°C)
	Shipping Temperature	-40°F to 158°F (-40°C to 70°C)
	Operating Humidity	10% to 90% RH @ 104°F (40°C) non-condensing
	Non-Operating Humidity	Up to 93% RH @ 104°F (40°C)
	DECLARED ACOUSTIC NOISE LEVELS	
	Sound Power	A weighted sound power LWAd=6,75 B
	Sound Pressure	A weighted sound pressure LpAm - 55dB
	SHOCK AND VIBRATION	
	Shock, Operational	10G's for 10 milliseconds
	Shock, Non-Operational	15G 11ms half sine
	Vibration, Operational	5-500Hz, 0.21Grms flat
	Vibration, Non-Operational	3-365-3Hz, 1.22 Grms,z-axis,0.85 Grms, X&Y axis shaped spectrum
	PHYSICAL	
	Height	3.5 in/ 8.9 cm
	Depth (excluding cables) (back of ear to back of controller handle)	P2000 G3 SFF 24-bay array: 20.28 in / 51.510 cm P2000 G3 LFF 12-bay array: 21.3 in. / 55.1 cm
	Width (body only)	17.6 in / 44.7 cm (w/ ears 19 in / 48.26 cm)
	Chassis Weight (no controllers)	P2000 LFF chassis: 34.1 lbs. (DC-pwr model: 37.9 lbs) P2000 SFF chassis: 32.3 lbs (DC-pwr model: 36.1 lbs)

Technical Specifications

P2000 G3 FC Controller **FC/iSCSI Combo Controller** **P2000 G3 SAS Controller** **P2000 G3 10GbE iSCSI Controller** **P2000 G3 iSCSI Controller (1Gb)**	**User Interface**	Status and activity provided via management interfaces. Status Indicators on front of Controller
	RAID Support	0, 1, 3, 5, 6, 10, 50
	Cache Memory	2GB Read/Write. ECC protection with backup to Flash memory (indefinite backup)
	Cache Backup	ECC protection with back up to flash memory (indefinite backup)
	Upgradeable Firmware	yes
	Disk Drive and Enclosure Protocol Support	6 Gb SAS - Serial Attached SCSI
	Host Ports	FC: 2 x 8Gb Fibre Channel SFP+ SAS: 4 -4x lane 6 Gb SAS Host Connections 10GbE iSCSI: 2 x 10GbE SFP+ 1GbE iSCSI: 4 x 1GbE RJ45
